DETAILED ACTION

This application is in condition for allowance except for the following formal matters:

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species I - An image forming apparatus including a control means for controlling a moving speed ratio between the image bearing member and the intermediary member, as shown by figure 1.

Species II - An image forming apparatus including a control means for controlling a condition of the primary transfer, as shown by figure 10

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 2852

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

During a telephone conversation with William Wannisky on 4 February 2005 a provisional election was made with traverse to prosecute the invention of Species I, claims 1-7. Affirmation of this election must be made by applicant in replying to this Office action. Claims 8-15 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding

Art Unit: 2852

whether there is a need for consulting the full patent text for details. See abstract, lines 8, 9, and 12.

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Reasons for Allowance

Claims 1-7 are allowed.

The following is an examiner's statement of reasons for allowance:

The claims are considered patentable because of the inclusion of the claim limitations, controlling a moving speed ratio between the image bearing member and the intermediary transfer member on the basis of a kind of the transfer material, that is not taught by or suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Related Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Funatani (US 6,226,465) discloses an image forming apparatus with a relative speed differential between intermediate transfer member and image bearing member.

Art Unit: 2852

Matsuzoe (JP 04-305666) discloses an image forming device with imparts a relative velocity difference to an intermediate transfer body and a photosensitive body to provide a fresh surface on the photosensitive body.

Okuno (JP 09-134079) discloses an image forming device wherein a ratio between the speed of the photosensitive drum and the intermediate transfer body is controlled to enlarge or reduce the size of the toner image.

Conclusion

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
